Ingredient or additive?

From academia to product development, marketing to sensory science, a career within food science offers a multitude of possibilities.

The production and distribution of food is one of the largest and most important areas of economic activity in the world, creating a high demand for motivated, enthusiastic scientists to work in this area.

Food scientists work within a range of areas including:
- Improving and maintaining agricultural yields
- Research, development and manufacture of new products from concept to launch
- Quality assurance and shelf-life
- Food law enforcement

If you're keen to work in a complex and challenging scientific area with the opportunity to develop your career and learn new skills, this may be the career path for you.

Fulfil your potential
Aim for a career in the chemical sciences
