

Imposition **or** innovation?

Formulation scientists work with new products to identify the most effective and commercially viable method of delivery.

Developing compositions and devices that take into account a variety of factors such as stability, reproducibility and biological properties, they work in a wide range of industries including:

// **pharmaceutical** // **food**
// **cosmetic** // **surface coatings**
// **consumer products**

These scientists must be technically expert whilst demonstrating key transferable skills from time management to communication, scientific leadership to independent problem solving.

If you're energised by new opportunities in a diverse field, from the development of prototypes to market testing and manufacture, this may be the career path for you.

Fulfil your potential
Aim for a career in the
chemical sciences
