

# Refreshment **or** responsibility?

Analytical chemists investigate the presence or quantity of particular substances or compounds within a product.

They are responsible for testing the safety and purity of a multitude of products including:

// food // water

// medicines // cosmetics

To fulfil their role they need to be flexible, organised, independent problem solvers, with a high attention to detail. If you're keen to learn and want a stimulating, technically skilled role, this may be the career path for you.

**Fulfil your potential**  
Aim for a career in the  
chemical sciences
